SUMMARY

Economics Master's graduate (CERDI) and Research Assistant in applied microeconometrics. I build analysis-ready household panels from raw survey microdata and estimate the causal effect of public transfers on household behaviour. My Master's thesis measures how migration and the transfer income it generates change agricultural input spending and family labour supply among Malawian households, using four waves of LSMS-ISA data. Current work estimates how poverty and inequality shape disaster mortality across 212 countries.

FIELDS & RESEARCH INTERESTS

Fields: Applied Microeconometrics and Programme Evaluation; Household Behaviour, Transfers and Liquidity Constraints; Public Economics; Development Economics.

Interests: Household responses to cash and in-kind transfers, spending, labour supply and credit constraints; inequality and poverty.

WORKING PAPER AND RESEARCH IN PROGRESS

A subnational geocoded dataset of global natural-hazard disasters in EM-DAT, 2000–2025

Data note with Florent Bresson (CERDI), 2026. Manuscript available on request.

- Geocoded 9,893 EM-DAT natural-hazard events into 49,922 sub-national administrative polygons across 195 countries, resolving locations to the fourth administrative level.
- Built a priority-ordered matching cascade (GAUL/GADM codes, harmonised gazetteer names, then OpenStreetMap and Photon), flagging the provenance of every location; 86.4% resolved from structured codes.

Road Infrastructure and Armed Conflict: Evidence from Ethiopia's Road Sector Development Program

In Progress.

- Assembled a balanced 1997–2024 panel of 780 woredas and 15,714 kebeles from road-network, ACLED, satellite and climate sources.
- Computed market-access indices from gravity models with cost-distance travel-time matrices, capturing trade costs and market integration.
- Designed an identification strategy combining continuous-dose TWFE and a long-difference IV from a minimum spanning tree.

RESEARCH EXPERIENCE

Research Assistant | CERDI (Université Clermont Auvergne), France

September 2025 - Present | Supervisor: Florent BRESSON

Project: INEG-Risque - Inequality, Poverty, and Natural Disaster Mortality (212 countries, 2000–2025)

- Built the geocoding pipeline behind the EM-DAT data note above; compiled the covariate set (GHSL/MODIS via Google Earth Engine, World Bank PIP/WDI, Penn World Table, SWIID) and estimated PPML and negative-binomial models in Stata.

Research Intern | CREM, Université de Rennes, France

April 2025 - June 2025 | Supervisors: Giuseppe MAGGIO and Stefaniya VELJANOSKA

Project: Impact Evaluation of Malawi's Farm Input Subsidy Program (FISP) on Household Migration

- Harmonised a four-wave World Bank LSMS household panel ($\approx 5,000$ rural households, 2009–2016); replicated the team's OLS, Probit and IV estimations in Stata, then selected and implemented the de Chaisemartin and d'Haultfoeuille (2024) intertemporal estimator for a treatment households switch into and out of across waves, with heterogeneity by credit constraint and by climate shock.

Research Intern | IRES, Université catholique de Louvain, Belgium

May 2024 - July 2024 | Supervisor: Fabio MARIANI

Project: Migration, Cultural Persistence, and Far-Right Voting in Italy

- Estimated OLS and Poisson regressions with high-dimensional fixed effects on a 65-million-record Italian dataset, and difference-in-differences on electoral outcomes (1948–2013); built interactive maps in RShiny.

EDUCATION

Master's in Development Economics & Magistère in Economic Development | Université Clermont Auvergne, CERDI, 2022–2025

- **Thesis:** *Migration, Labor-Saving Technology Adoption, and Agricultural Transformation in Malawi*. Supervisors: Simone Bertoli and Vianney Dequiedt. Built the household panel from raw LSMS-ISA modules (2010–2019), then estimated the effect of migration and transfer income on input spending and family labour supply with a Mundlak correlated random effects probit and a two-stage residual inclusion control function instrumented by village leave-out migration networks.

Bachelor's in Economics | Université Clermont Auvergne — CERDI, 2020–2023.

Graduate coursework: Advanced Econometrics and Statistics; Impact Evaluation; Advanced Microeconomics (adverse selection, moral hazard); Public and Environmental Economics; Game Theory; Private Sector and Development.

TECHNICAL SKILLS & LANGUAGES

Programming: Python, Stata, R.

Software & tools: QGIS, Google Earth Engine, LaTeX, Microsoft Excel.

French (native); English (fluent).

WORKSHOPS & SEMINARS

- Louvain Fresh Workshop, IRES, UCLouvain (June 2024); CERDI Development Economics Seminar, presenter and discussant (since 2025).
