Clermont-Ferrand, France

SUMMARY

Development Economics Master's graduate (CERDI) and Research Assistant in applied microeconometrics, working on transport infrastructure, trade costs, and climate-related risk. Combines household-survey, satellite, and geospatial sources with gravity models and causal-inference methods in Stata, R, and Python.

FIELDS & RESEARCH INTERESTS

Fields: International Trade and Spatial Integration; Climate Change and Inequality; Applied Microeconometrics and Statistics; Development Economics.

Interests: Transport infrastructure and market integration; migration and labor reallocation; disaster exposure and vulnerability.

WORKING PAPER AND RESEARCH IN PROGRESS

A subnational geocoded dataset of global natural-hazard disasters in EM-DAT, 2000–2025

Data note with Florent Bresson (CERDI), 2026. Manuscript available on request.

- Geocoded 9,893 EM-DAT natural-hazard events into 49,922 sub-national administrative polygons across 195 countries, resolving locations to the fourth administrative level.
- Built a priority-ordered matching cascade (GAUL/GADM codes, harmonised gazetteer names, then OpenStreetMap and Photon), flagging the provenance of every location; 86.4% resolved from structured codes.

Road Infrastructure and Armed Conflict: Evidence from Ethiopia's Road Sector Development Program

In Progress.

- Assembled a balanced 1997–2024 panel of 780 woredas and 15,714 kebeles from road-network, ACLED, satellite and climate sources.
- Computed market-access indices from gravity models with cost-distance travel-time matrices, capturing trade costs and market integration.
- Designed an identification strategy combining continuous-dose TWFE and a long-difference IV from a minimum spanning tree.

RESEARCH EXPERIENCE

Research Assistant | CERDI (Université Clermont Auvergne), France

September 2025 - Present | Supervisor: Florent BRESSON

Project: INEG-Risque - Inequality, Poverty, and Natural Disaster Mortality (212 countries, 2000–2025)

- Built the geocoding pipeline behind the EM-DAT data note above; compiled the covariate set (GHSL/MODIS via Google Earth Engine, World Bank PIP/WDI, Penn World Table, SWIID) and estimated PPML and negative-binomial models in Stata.

Research Intern | CREM, Université de Rennes, France

April 2025 - June 2025 | Supervisors: Giuseppe MAGGIO and Stefaniya VELJANOSKA

Project: Impact Evaluation of Malawi's Farm Input Subsidy Program (FISP) on Household Migration

- Harmonised a four-wave World Bank LSMS household panel ($\approx 5,000$ rural households, 2009–2016); estimated heterogeneity-robust staggered difference-in-differences, Mundlak correlated random effects, and IV Probit in Stata.

Research Intern | IRES, Université catholique de Louvain, Belgium

May 2024 - July 2024 | Supervisor: Fabio MARIANI

Project: Migration, Cultural Persistence, and Far-Right Voting in Italy

- Estimated OLS and Poisson regressions with high-dimensional fixed effects on a 65-million-record Italian dataset, and difference-in-differences on electoral outcomes (1948–2013); built interactive maps in RShiny.

EDUCATION

Master's in Development Economics & Magistère in Economic Development | Université Clermont Auvergne, CERDI, 2022–2025

- Thesis:** *Migration, Labor-Saving Technology Adoption, and Agricultural Transformation in Malawi.* Supervisors: Simone Bertoli and Vianney Dequiedt.
- Bachelor's in Economics** | Université Clermont Auvergne — CERDI, 2020–2023.
- Relevant coursework:** International Migration and Trade Policy (Ricardian, HOS and heterogeneous-firm models; tariff structure and growth); Global Issues and International Institutions; Advanced Econometrics; Impact Evaluation; Survey Design and Survey-Data Processing.

TECHNICAL SKILLS & LANGUAGES

Programming: Python, Stata, R.

Software & tools: QGIS, Google Earth Engine, LaTeX, Microsoft Excel.

French (native); English (fluent).

WORKSHOPS & SEMINARS

- Louvain Fresh Workshop, IRES, UCLouvain (June 2024); CERDI Development Economics Seminar - presenter and discussant (since 2025).
